

Energy management solutions and comfort control

Save on average **20% to 40%**
in guest room HVAC energy costs!

- ✓ Quick-and-easy installation
- ✓ Wireless solution: no new cabling
- ✓ Occupancy sensor technology
- ✓ Compatible with most PMS systems

Energy management solutions and comfort control

FACT : Hotels with occupancy based, intelligent thermostats greatly reduces their HVAC energy consumption as well as their ecological footprint.

FEATURES

Thermostat automatically adjusts temperature to save energy

Dynamic intelligent recovery optimizes energy savings

Configurable temperature setback and set point limits

Built-in occupancy motion and thermal sensors

Integrated 64-channel frequency-hopping wireless networking

Automatic or manual $\pm 1^{\circ}\text{F}$ and $^{\circ}\text{C}$ temperature precision

Comprehensive remote and multi-property management

Free upgrades

Around-the-clock monitoring

Extensive configuration options and statistical reporting

Universal compatibility

Full interoperability with virtually any hospitality HVAC system - existing or emerging

Wired or wireless connection makes it easy to install in any property

Streamlined installation procedure minimizes the installation time
